

RestaurantOS

Quick Start Guide

Daily operational reference -- for full detail see the User Manual

Version 1.0 (Pilot Edition) | 2026-08-12

Login

Go to the login page, enter your email and password. What you see next depends on your role — that's normal.

Tables

Tables live in zones (Indoor, Outdoor, Rooftop, etc.). Status is **Available** or **Occupied**. A table becomes Occupied the moment an order is created on it, and becomes Available **automatically** the moment its bill is fully paid.

One open order per table at a time. If a table already has an order, add items to it rather than starting a second one — the system currently allows a second order, but it bills separately and can confuse the guest.

QR Orders (guest, self-service)

Guest scans the table's QR code → sees the menu → adds items to cart → submits. This fires straight to the kitchen/bar automatically — no staff action needed to start it, but keep an eye on the queue.

Waiter Orders

Select the table → add items → review with the guest → **Fire**. Unlike a QR order, a waiter order does not go to the kitchen until you explicitly fire it.

Kitchen

Open the Kitchen Display. Work tickets top to bottom: **Fired** → **In Progress** → **Ready** → **Served**. Don't skip a step. Food lands here; drinks land on the Bar queue.

Bar

Same as Kitchen, for drink tickets: **Fired** → **In Progress** → **Ready** → **Served**.

Billing

Generate the bill once the order is ready to be paid. It shows Subtotal, Tax, Amount Paid, and Amount Due.

There is no tip field — do not try to add one. If a guest wants to tip, that's handled directly with the server (cash or UPI), outside RestaurantOS entirely.

Payment

Enter the amount being paid — never more than Amount Due (an overpayment is rejected automatically, with nothing changed). A partial payment is fine; the bill and table both stay open. The payment that brings Amount Paid to exactly Amount Due closes the bill.

There is no refund button. RestaurantOS v1 doesn't have one. A real refund is handled entirely outside the system.

Table Release

This is automatic. The instant a bill is fully paid: the bill closes, the order closes, and the table goes back to Available — by itself.

Never manually mark a table available after a normal payment. If it doesn't happen on its own, stop and tell your manager immediately.

End-of-Day

Run the End-of-Day report at close. It shows order count, gross sales, amount collected, tax, tender breakdown, and top items.

Tips and Refunds will always show 0 — that's correct, since RestaurantOS doesn't track either one, not because nobody tipped today.

One-line reminders

- Add to the existing order — don't start a second one on an occupied table.
- Fire waiter orders explicitly; QR orders fire themselves.
- No tips, no refunds, in the system — ever.
- Never manually release a table after a normal payment.
- Inventory only auto-updates for menu items with a recipe configured — ask your Inventory Manager which ones those are.
